

Cybersecurity Crisis Prevention Solutions

Prevention is better than cure

As the volume, sophistication and impact of cybersecurity incidents continues to grow, many organizations are re-examining their prevention strategies.

From zero day vulnerabilities that go unseen by traditional security products such as antivirus solutions, to the threat of ransomware and even unfortunate user errors, the risks remain extremely high.

It's clear that for many organizations, the ability of cybercriminals to attack their systems is way ahead of their ability to stop them. When their security is breached, the results can have far reaching impact on lost revenue, reputation damage and system downtime. With the damage from cybercrime reaching a total of \$6 trillion in 2021, it's easy to see that prevention is better than cure.

Proactive protection from today's cybersecurity risks

That's why Silxo and Glasswall have partnered to deliver a cybersecurity crisis prevention service and solutions portfolio that meets the needs of organizations determined to stay safe from attacks.

Combining years of technical insight, experience and investment in product development, Silxo and Glasswall enable IT and security teams to minimize the chances that a cybersecurity attack will compromise network defences or exploit user errors. Here's how:

Silxo is a technology services company that specialises in supporting businesses to achieve accelerated growth and success. Their portfolio includes crisis prevention services and solutions that have enabled organizations around the world to protect their critical systems from a wide range of major cybersecurity risks.

Silxo's solutions are delivered by a team of experienced professionals who bring intuitive knowledge and a track record of success across a diverse range of technology environments and crisis scenarios.

Glasswall is a leading cybersecurity company that keeps businesses moving with instant file protection. Its leading Content Disarm and Reconstruction (CDR) technology instantly removes potential file-based threats, so organizations can trust every file.

With Glasswall CDR, documents and attachments are disarmed of potential threats and delivered instantly, ensuring only safe files enter and exit the organization.

Protect files throughout your organization

Email

Bulk file sanitization

Website downloads and uploads

By preventing the risk posed by file-based threats, a Glasswalled file gives users the freedom to open any document or attachment without delay. Glasswall's patented CDR Platform inspects, cleans and rebuilds files to their known good state in real-time - proactively protecting organizations against the most persistent and complex file-based threats.

Key benefits

- ✓ Vulnerability audits and reporting
- ✓ Risk management strategy
- ✓ Secure and optimize files and documents
- ✓ Instantly remove file-based risk and anomalies
- ✓ Enhance productivity across the organization
- ✓ De-risk documents without users even noticing
- ✓ Deploy with ease in days not months
