

Menlo Security Plug-in

The Menlo Security Isolation Platform (MSIP) provides organizations with a way to insulate users from web-based threats. The Secure Web Gateway integrates with a variety of third-party malware detection protection solutions.

Antivirus and Endpoint Detection and Response (EDR) solutions don't provide bullet-proof protection to users. Threats can still evade detection. Sandboxes are better at addressing threats within files, but often degrade the user experience by interrupting productivity.

The Glasswall - MSIP integration ensures that users can safely browse the internet and receive files free from threats - without compromising on usability or speed.

Key benefits

- ✓ Provides administrators with the ability to set acceptable use policies to block malicious activity - including compromised websites, cybersquatting, file uploads and downloads, social-posting and other known threats
- ✓ Business files being downloaded by users can be made safe without disruption to the user
- ✓ Guaranteed protection from malicious threats in lightning speed
- ✓ No loss of productivity often seen with sandboxing
- ✓ Users can safely browse the Internet and receive files free from threats
- ✓ No compromising usability or speed

Key features

- Glasswall Cloud-Native CDR Platform provides sub-second threat-removal capabilities when enabled as part of the Menlo Security Isolation Platform (MSIP)
- Industrial scale Cloud-Native performance
- Glasswall CDR Platform can be deployed in both public and private clouds
- Traffic can be distributed across multiple Availability Zones (AZs) or Regions
- Many thousands of Internet users can be supported in parallel for any deployment
- Designed to auto-scale horizontally

Use cases

File uploads or downloads to block malicious activity

Targeted spear-phishing or generic phishing attacks

Zero Trust architecture

Privacy protection

Compromised websites

How it works

The isolation-powered, Zero Trust solution routes all online activity through a remote cloud-based browser and treats all content as malicious. Glasswall's Cloud-Native Content Disarm and Reconstruction (CDR) Platform provides sub-second threat-removal capabilities when enabled as part of the Menlo Security Isolation Platform (MSIP).
